

Signiant Education Services

Signiant is dedicated to providing its customers and partners with the highest level of service. Signiant Content Distribution Management software is the only comprehensive, software-only solution for managing, securing, automating and accelerating digital file-based workflows. Signiant educational services assure the rapid adoption of Signiant technology in your business and help deliver results more quickly.

Learn Content Distribution Management from the People Who Invented It

Today, file-based workflows are the inevitable result of the transition from analog to digital production. This transition has, in turn, created an explosion of digital media content which must be ingested and moved rapidly throughout the enterprise. With Signiant education classes, you will ensure that you have the knowledge to maximize what Signiant can deliver in your organization.

Signiant instructors are highly-qualified, rigorously selected and comprehensively trained individuals who have many years of experience in the design, implementation and management of digital media distribution management systems. They are also well-versed in the business processes and workflows used in the media and entertainment industry.

Content Distribution Management software

Signiant Central Media Manager delivers the power and intelligence of an enterprise-wide digital media distribution solution through a web-based console that centralizes control, resulting in superior control and management of resources.

Signiant Media Agents are deployed throughout the network and are responsible for the intelligent distribution and collection of data.

Signiant Media Exchange extends the reach of the Signiant-enabled network to ingest remotely created content of user-generated content.

Signiant High Availability Central Media Manager is an optional module that protects the uptime of the Signiant-enabled network with hot-swappable redundancy of the Central Media Manager.

Signiant Training Offerings

Introduction to Signiant is a hands-on course designed for technical staff involved in the architecture, installation, configuration, deployment and operations of Signiant. It is expected that students have experience or knowledge in the administration of Windows® and UNIX® systems as well as familiarity with TCP/IP networking before attending this course. Upon successful completion, the student should be comfortable with the install, configuration, operation and troubleshooting of Signiant. Additionally, the student will be aware of Signiant product architect.

Custom Workflows with Signiant is a hands-on, workshop-based course designed for technical staff involved in the architecture, design, integration and development of digital workflows using Signiant tools and technologies. It is expected that students have some knowledge or experience with Signiant and have practice experience with development in Java®, Perl, Java serve pages, Javascript, Apache/Tomcat, IIS/.NET, HTML and/or other similar technologies and languages. Ideally, students will also be familiar with networking and security concepts and arrive at the course with a specific use-case for automating digital workflows. Upon successful completion, the student will have working source code, knowledge of implementation best practices and be able to develop Signiant-enabled digital workflows.

Who Should Attend Signiant Training?

Signiant education courses are designed for the following professional in media and entertainment companies:

- Information technology systems administrators
- Personnel responsible for digital media businesses and strategies
- IT architects who design and implement enterprise systems
- Signiant partners and resellers

Course Prerequisites & General Information

Students attending Signiant training should have general technical proficiency with networking and operating systems including Windows® and UNIX®.

Class size is limited to a maximum of six (6) students to ensure an in-depth educational experience.
