

The Quantum logo is displayed in a white, sans-serif font against a dark background. The background features a collage of glowing, translucent spheres of various sizes, some containing abstract digital patterns or maps, set against a dark blue and black backdrop with light rays and a grid pattern.

Quantum®

Digital Asset Movement Backbone for Media Operations

Quantum StorNext and Signiant Extreme File Sharing

As the production and distribution of movies, TV shows, and other media transitions to file-based workflow, media operations specialists are finding it harder than ever to manage their highly valuable digital assets across the entire production-to-plaintext process. The combination of the Quantum StorNext® high-performance shared file system with Signiant's extreme file sharing solutions provides customers with both the reliability and speed needed to meet these challenges. These products work together, giving customers a "best of both worlds" solution that provides IT visibility and control over movement of high-value digital assets, with the ease-of-use of a consumer offering.

SECURE, FILE-BASED MEDIA FILE SHARING

Signiant is the media backbone for the world's top media outlets, providing easy, automated control over how files flow throughout the production process. Signiant's Media Shuttle product delivers an easy, consumer-like workspace for ad-hoc file sharing. Signiant's Managers and Agents product helps IT automate file workflow and movement. With Signiant, files are stored on the local Quantum StorNext File System for faster workflows, and are never transferred to third-party cloud providers or unauthorized storage resources, providing the maximum protection for your sensitive intellectual property.

TRANSFER AND SHARE EXTREME FILES WITH TEAMS 200X FASTER

Cumbersome processes for transferring files have led many in the media and entertainment industry to employ cloud-based, Dropbox-like file sharing services—despite their slow speeds and insufficient security. The Signiant solutions accelerate file sharing with high-speed, network-efficient file transfer via a patented acceleration protocol that can be up to 200X faster than FTP with 95+% network efficiency.

CENTRAL ARCHIVING ENABLING DISTRIBUTED WORKFLOWS

Combining Signiant's high-speed and secure content distribution software with StorNext Storage Manager's ability to archive content based on user-defined policies, media organizations can create a distributed workflow with a centralized archive. The ability to move content to various geographical locations, but still protect this content in a centralized and cost-effective archive, can help you better monetize your content.

SOLUTION PROFILE

The combined Signiant and Quantum solution is ideal for:

- Securely sharing large files
- Integrated workflow for sharing large media files with production teams
- User-friendly, consumer-like experience for collaborating with extended teams
- The ability to create a centralized archive for distributed content production
- Full visibility and control over where files are, and who is accessing them
- Rich automation ties into existing high-performance storage, systems, and processes

FULL CONTROL OVER ACCESS AND ACTIVITY

With the Signiant solutions, IT and Media Operations teams can choose who is authorized to send and receive media files, track the flow of content, and monitor and control storage capacity, transfer frequency, transfer rates, file sizes, peak storage time, and transfer speeds. Signiant also provides a dashboard view across multiple portals, including color-coded status alerts to make file and user organization easier than it has ever been.

BRANDED COLLABORATIVE WORKSPACES

Maintaining your file infrastructure can get really confusing with multiple workgroups, teams, or companies. Signiant allows users to customize a file transfer portal in minutes with your own logo, background images, color scheme, and element placement. In order to promote brand affinity between all participants involved in the content creation process, each portal can be branded separately for the intended workgroup, project team, or enterprise.

THE SIGNIANT ADVANTAGE

Used today by more of the world's top broadcasters, studios, media service providers, sports networks, and game developers, Signiant delivers intelligent software solutions that facilitate the movement of file-based media between systems, applications, and users—from pre-production content and mobile news to finished-format movies, trailers, and TV episodes.

THE STORNEXT ADVANTAGE

In addition to providing high-throughput access for ingest and edit, StorNext provides an automated archival solution for video, audio, and graphics files. Content is held on the most appropriate disk and tape tier, freeing up valuable high-performance disk and providing cost-effective long-term storage.

ABOUT QUANTUM

Quantum is a proven global expert in Data Protection and Big Data management, providing specialized storage solutions for physical, virtual and cloud environments. From small businesses to major enterprises, more than 100,000 customers have trusted Quantum to help maximize the value of their data by protecting and preserving it over its entire lifecycle. With Quantum, customers can Be Certain they're able to adapt in a changing world – keeping more data longer, bridging from today to tomorrow, and reducing costs.
